

FIELD REPORT

GREIS JULIETH CRUZ REYES
UNIVERSITY AT BUFFALO, SUNY

1. GENERAL IMPRESSION OF RESEARCH PERIOD ABROAD:

Researching at Johannes Kepler University at Linz was a motivating and gratifying experience. During the time working I learnt computational skills and tools that help me in the analysis of the out coming results in a more efficient way. In addition, the gently assistance of professors and members of the group of many body physics in the physics department allows me to interact and participate in several meetings, discussions and colloquiums.

2. QUALITY OF THE HOST INSTITUTION:

I did not have any difficulty in the university, the installments, library and resources was always complete and available, and my workspace was comfortable and appropriate for working, I could use a big screen and a faster computer than my personal laptop.

With the wonderful and kind help of Mr. Johannes Rosina, the technician in the physics department, I acquired an account into the cluster of computers in the department and solved several computational issues that always are present into the dealing of researching. In addition I was able to have access to any facility provided for the university as an usual student and the constant caring of Mrs. Emma Huss who was guiding me in the process from the very beginning until the final reminders.

In addition, with the advices of professor Robert Zillich, I could have regular meetings (one or two per week), where I discussed and clarified many issues with respect to the research, which I am very grateful for their open and kind way of teaching me.

3. CONTACTS WITHIN HOST INSTITUTION / INTEGRATION IN THE ORGANIZATION:

Basically, my discussions and advances in the research project were with Professor Robert Zillich.

Also, I got know new people in the community of many particle physics and I had a nice interaction and conversations with them:

Dr. Iran Seydi (invited lecturer at JKU)
Clemens Staudinger
Florian Sipek
Johannes Rosina
Dr. Martin Hoffman
Wolfgang Stockinger (Phd student in mathematics)

4. RECOMMENDATIONS FOR FUTURE MARSHALL PLAN STUDENTS / FELLOWS:

I do not have any recommendation, it was a great research experience in a beautiful country.
